Service Bridge®

Service Bridge® is service software that provides a bridge between a company's service technicians and its accounting department.

- 1. Users** - Service Bridge users run the application on their desktop computer. The application connects to the database which can either be on their computer or on a centralized server.
- 2. Service Bridge Database** - The Service Bridge database is a centralized database that allows multiple users to access data.
- 3. Accounting Packages** - A generic accounting package bridge allows any accounting package that can import data from a text file to import Service Bridge accounting data.
- 4. Business Works** - The Business Works bridge allows data to be synchronized between Business Works and Service Bridge. This bridge is bi-directional.
